Re: Sling Compatibility Letter

Inovi, through its sling manufacturing partner, has been manufacturing slings since 2004 solely to be used with other manufacturers' lifts. Since 2004, we have sold over 4,500,000 slings with zero liability claims (we do, however, carry \$10M liability coverage). All of our slings are manufactured in an FDA registered, ISO certified facility per ISO 10535 requirements (Hoists for the transfer of disabled persons). Each sling is CE marked and each batch is weight tested by an independent third party. All slings have undergone all other relevant testing from flammability and breathability to pressure mapping. Our slings are barcoded to GS1 standards as well.

Compatibility tests for use with third party lifts (including lifts from Arjo Huntleigh/Bhm, Liko, Guldmann, Handicare, Prism, Tollos, Joerns, Invacare, Drive and Amico) have been successfully completed. Inovi offers both clip and loop attachment configurations for different manufacturer's spreader bars. While it is necessary that a patient assessment be performed to determine that the appropriate sling type and size is selected (and that all slings are inspected prior to use for condition and proper attachment) and that the lifts are in good working order, we confirm that our slings are compatible with the above manufacturers' lifts and we stand behind the use of our slings on these lifts (subject to customary exclusions in our Warranty).

Thank you

Inovi Healthcare
